

Baseline comparison (§4.4) — four arms, three qualitatively different failure signatures

reference strip / band21-25 lowfreq / band10-25 IP-Adapter-SDXL krea2-identity-edit

defect 20% [12,32] defect 82% [70,89] defect 33% defect 2% [0,9]

u7122_s0
all 4 match identity; only strip/krea2 are defect-free — lowfreq collages, IP-Adapter garbles the hand

u5648_s0
hard subject: iconic mask dropped or mis-rendered by every arm — krea2 normalizes it away instead of garbling it
